### iPad/Android O.S. Supported by Fastrack

Plainview, NY.....Fastrack Healthcare Systems announced today the immediate availability of a new client application that allows for the use of the Apple iPad and Android operating system supported devices, with their Home Care Enterprise software. Fastrack clients' can now access the entire suite of Fastrack HME, Infusion Pharmacy and Home Healthcare Agency applications on one of these devices including Fastrack's Delivery Automation and Equipment Maintenance module, a mobile application that allows delivery personnel to verify the correct product is being delivered, capture the patient's signature and collect COD amounts by processing credit cards in the field. These devices can also be used with Fastrack's Point of Care mobile application which allows nurses, respiratory therapists and other field personnel to capture virtually any clinical information using user definable forms at the patient's bedside.

The iPad and Android client software, which is required for these devices, make use of intuitive multi-touch gestures to achieve popular mouse and keyboard operations. Both clients incorporate Auto-Zoom, a valuable feature for different screen sizes and touch screens. When accessing the Fastrack applications, Auto-Zoom detects the section of the screen currently active in the application and automatically zooms in on that area.

Fastrack clients utilizing the company's hosted (SaaS) environment can simply download the free iPad or Android client. Clients with an on-premise server running Fastrack will require a software license which can be ordered from their Fastrack Account Manager. Clients can mix

and match devices so that certain field personnel can be using the Apple iPad and Android along with Windows devices, the current operating system supported by Fastrack.

According to Spencer Kay, President/CEO of Fastrack, “We believe this is a major breakthrough for our clients in that it will allow them to use the less costly Android devices for their field personnel or take advantage of the benefits of the iPad. We believe offering more alternatives beyond Windows operating system devices will provide our clients with greater flexibility in their computer infrastructure.”

### **About Fastrack**
